

NEW from BEEKLEY

Introducing Cradles™

Professional, Safe, Fast Wire Management

Replaces Gauze, Tape and Cups

Accurate

Cradles remove easily ensuring the wire isn't tugged or moved before surgery. Now the wire stays in place allowing greater accuracy of specimen removal.

Safe

Cradles increase radiologist and surgeon confidence because the wire is securely protected. The see-through cover ensures the wire and exit site can be monitored.

Comfortable

Cradles are a technologist developed, professional product designed to help provide patients with a more comfortable transition from the needle localization to surgery.

Cradles are professional, clear covers for helping protect and stabilize the needle localization wire

NEW!

Cradles™

Needle Localization Wire Protectors

Cradles help prevent wire migration or movement during the patient's transport to surgery and when removing the wire covering, thereby ensuring more accurate excisional biopsies.

Cradles
